What is Rohypnol®?
Rohypnol® is a trade name for flunitrazepam, a central nervous system (CNS) depressant that belongs to a class of drugs known as benzodiazepines. Flunitrazepam is also marketed in generic preparations and other trade name products outside of the United States.

Like other benzodiazepines, Rohypnol® produces sedative-hypnotic, anti-anxiety, and muscle relaxant effects. This drug has never been approved for medical use in the United States by the Food and Drug Administration. Outside the United States, Rohypnol® is sometimes prescribed to treat insomnia. Rohypnol® is also referred to as a “date rape” drug.

What is its origin?
Rohypnol® is smuggled into the United States from other countries, such as Mexico.

What are common street names?
Common street names include: Circles, Forget Pill, Forget-Me-Pill, La Roche, Lunch, Money Drug, Mexican Valium, Plague, R2, Reynolds, Roach, Roach-2, Roaches, Roachies, Roapies, Row-Shay, Ruffies, and Wolfies

What does it look like?
Prior to 1997, Rohypnol® was manufactured as a white tablet (0.5-2 milligrams per tablet), and when mixed in a drink, was colorless, tasteless, and odorless. In 1997, the manufacturer responded to concerns about the drug’s role in sexual assaults by reformulating the drug.

How is it abused?
The tablet can be swallowed whole, crushed and snorted, or dissolved in liquid. Adolescents may abuse Rohypnol® to produce a euphoric effect often described as a “high.” While high, they experience reduced inhibitions and impaired judgment. Rohypnol® is also abused in combination with alcohol to produce an exaggerated intoxication.

In addition, abuse of Rohypnol® may be associated with multiple-substance abuse. For example, cocaine addicts may use benzodiazepines such as Rohypnol® to relieve the side effects (e.g., irritability and agitation) associated with cocaine bingeing.

Rohypnol® is also feared to be physically and psychologically incapacitate women targeted for sexual assault. The drug is usually placed in the alcoholic drink of an unsuspecting victim to incapacitate them and prevent resistance to sexual assault. The drug leaves the victim unaware of what has happened to them.

How can it be prevented?
Recognize the signs of Rohypnol® abuse, and report any suspicious activity to local law enforcement or the National Crime Prevention Council. If you suspect someone is being drugged with Rohypnol®, call 911 immediately.

Importance of education and awareness
Rohypnol® is a dangerous drug that can have serious consequences. By educating yourself and others about the dangers of Rohypnol®, you can help prevent its misuse and abuse.
Angry Octopus
Lori Lite
Angry Octopus is a story that teaches children how to use progressive muscle relaxation and breathing techniques to calm down, lower stress, and control anger. Children relate to the angry octopus in this story as the sea child shows the octopus how to take a deep breath, calm down, and manage anger.

CBT Made Simple: A Clinician’s Guide to Practicing Cognitive Behavioral Therapy
Nina Josefowitz

Structured around these evidence-based principles, this user-friendly guide will help you learn CBT and deliver it to your clients in the most optimal way.

Helping the Suicidal Person
Stacey Freedenthal
Helping the Suicidal Person provides a highly practical toolbox for mental health professionals. The book first covers the need for professionals to examine their own personal experiences and fears around suicide, moves into essential areas of risk assessment, safety planning, and treatment planning, and then provides a rich assortment of tips for reducing the person's suicidal danger and rebuilding the wish to live.

Nurturing Emotional Resilience in Vulnerable Children and Young People: A Practical Guide
Juliette Ttofa
Nurturing Emotional Resilience in Vulnerable Children and Young People is a guidebook that provides a framework and practical strategies to support children's emotional resilience at a whole-school and more targeted level. Underpinned by research into the concept of resilience, the book centers around the ‘Resiliency Rainbow Toolkit’; a ready-to-use theoretical model that draws upon a range of ideas and approaches that act as a resiliency building programme.

Superhero Therapy
Janina Scarlet
This fun, unique, and “outside-the-box” self-help guide provides everything you need to begin your very own superhero training using evidence-based ACT and mindfulness skills. Within these colorful pages, you’ll team up with a group of troubled heroes—inspired by both fictional characters and real-life people—enlisted at the Superhero Training Academy.

Theory and Practice of Addiction Counseling
Pamela S. Lassiter
This book brings together contemporary theories of addiction and helps readers connect those theories to practice using a common multicultural case study. Theories covered include motivational interviewing, moral theory, developmental theory, cognitive behavioral theories, attachment theory, and sociological theory. Each chapter focuses on a single theory, describing its basic tenets, philosophical underpinnings, key concepts, and strengths and weaknesses.
High on Painkillers: Addiction and Overdose
The truth about the misuse of prescribed painkillers is startling. Misused painkillers such as Oxycodone, Vicodin and methadone are responsible for more deaths than cocaine and heroin combined. According to the Centers for Disease Control, prescription painkillers have surpassed car crashes as the leading cause of accidental deaths in the United States. Students learn the dynamics of painkiller addiction and abuse through the personal stories of teens who have been hooked on legal pain killers. These teens describe the downward spiral of addiction that can eventually lead to death by overdose. Former users, physicians and drug education experts communicate the hard facts to viewers including how difficult it is for users to cope with withdrawal symptoms such as depression, anxiety, shakiness and lack of energy.

High Anxiety
In this video, a diverse group of teens who are dealing with anxiety, plus two adolescent psychologists, discuss the types of things that cause anxiety in young people: challenging tests, meeting new people, competing in school sports, public speaking etc. The on-camera experts help viewers identify if they have an anxiety disorder. Some of the disorders discussed are generalized anxiety disorder (GAD), panic disorder, social anxiety and phobias. Symptoms of these and other disorders are explained as well as ways to cope. The program describes the importance of seeking professional help when anxiety disorders involve more than temporary worry or fear.
